Brand & Style

This design system is crafted for a high-end personal brand that balances technical mastery with creative flair. The personality is **Sophisticated, Visionary, and Precise**. It targets recruiters and collaborators in the premium tech and design sectors.

The visual style is a fusion of **Minimalism** and **Glassmorphism**. It utilizes a "Deep Space" canvas where content appears to float on translucent glass planes. The aesthetic avoids heavy, solid blocks in favor of light-refracting surfaces and vibrant, neon-inspired accents that feel "alive" against a

dark substrate. Every interaction should feel fluid and intentional, evoking the atmosphere of a premium developer console or a luxury digital atelier.

Colors

The palette is built on a foundation of **Deep Navy and Charcoal** to provide a more sophisticated alternative to pure black.

- **Primary & Secondary:** A gradient-ready pairing of Vivid Pink and Electric Purple. These should be used for interactive elements, highlights, and subtle "neon glow" effects.
- **Tertiary:** A soft Teal/Mint used sparingly for success states or to break the warm color dominance.
- **Backgrounds:** Use `dark-navy` for the global background. Interactive surfaces use `surface-glass` with a backdrop blur of 12px-20px to create depth.
- **Contrast:** High-contrast white (`#F8FAFC`) is reserved for primary text, while muted slate is used for secondary information to maintain focus on the hierarchy.

Typography

The typography system relies on **Plus Jakarta Sans** for a modern, slightly geometric character in headings, and **Inter** for its unparalleled legibility in technical body content.

Headlines should utilize tight letter spacing and heavy weights to create a "Display" feel. For the primary hero text, apply a subtle linear gradient using the primary and secondary colors. Body text should maintain a generous line height (1.6) to ensure readability against the dark background. Use uppercase labels with increased tracking for metadata, categories, and section overlines to provide a technical, architectural feel.

Layout & Spacing

The design system employs a **Fixed Grid** approach for desktop, centering a 12-column structure within a 1200px container.

- **Vertical Rhythm:** Sections are separated by large 8rem gaps to provide breathing room and emphasize the minimalist aesthetic.
- **Internal Padding:** Cards and containers use a consistent 2rem (32px) internal padding.
- **Mobile Adaptation:** On mobile devices, the 12-column grid collapses to a single column, gutters reduce to 1rem, and side margins are fixed at 5vw.

- **Alignment:** All text elements follow a strict left-aligned baseline to maintain professional structure, with the exception of specific hero moments which can be centered for impact.

Elevation & Depth

Depth is not communicated through traditional black shadows, but through **Tonal Layering** and **Luminosity**.

1. **Base Layer:** The deepest background (`dark-navy`).
2. **Surface Layer:** Translucent cards using `surface-glass` . These feature a 1px border with 10% white opacity to define edges.
3. **Accent Elevation:** Interactive elements (like active buttons) use a "glow" shadow. This is an ambient shadow tinted with the primary color (e.g., `box-shadow: 0 10px 30px -10px rgba(244, 114, 182, 0.5)`).
4. **Backdrop Blurs:** Any element sitting above another must use a `backdrop-filter: blur(16px)` to simulate physical glass, ensuring text remains legible over background gradients or decorative elements.

Shapes

The shape language is **Refined and Modern**.

The standard radius is 0.5rem (8px), providing a balance between approachable softness and professional precision. Buttons and high-level cards should scale up to `rounded-1g` (1rem) to feel more substantial. Form inputs and status tags use the standard `rounded` (0.5rem) setting. Avoid pill-shapes except for very small utility tags (e.g., skill chips) to maintain a more architectural, structured look.

Components

- **Buttons:** Primary buttons use a linear gradient (Primary to Secondary) with white text and a subtle hover glow. Secondary buttons use a glass background with a 1px tinted border.
- **Chips/Tags:** Small, high-contrast badges. Use a 10% opacity background of the accent color with 100% opacity text for a "light-box" effect.
- **Cards:** The core of the system. Glass-morphic surfaces with a 1px `border-white/10` and `backdrop-blur` . On hover, the border opacity should increase to 30%.
- **Input Fields:** Deep charcoal background (`#1E293B`) with a 1px border that glows when focused. Placeholder text should be muted slate.

- **Lists:** Clean, border-bottom separation using `white/5` . Use the primary color for bullets or icons to guide the eye.
- **Gradients:** Use "Mesh Gradients" in the background corners—large, soft blurs of Pink and Purple that move slowly—to prevent the dark mode from feeling static.
